

## **ABSTRACT OF THE DISCLOSURE**

The present disclosure provides systems and methods for accessing messages in one communication system by another communication system. In some embodiments, a request to access data is received from a second communication system. The data is located at a first communication system. The first communication system is configured to communicate using a first standard communication protocol, while the second communication system is configured to communicate using a second standard communication protocol. The received request is converted to a command of the first standard communication protocol. Using the command, the data at the first communication system is accessed.
